

ossec-makelists

The `ossec-makelists` utility to compile cdb databases. This will scan [ossec.conf](#) for database files, check the mtime, and recompile all out of date databases.

-c <config>	Run with configuration file of <code>config</code> .	
	Default Value	<code>/var/ossec/etc/ossec.conf</code>
-d	Run in debug mode, may be repeated to increase the verbosity of the debug messages.	
-F	Force the rebuild of all configured databases.	
-g <group>	Run as a group.	
-h	Display the help message.	
-t	Test configuration.	
-u <user>	Run as a user.	
-V	Display the version and license information.
